Project Title

Login Page User Interface

Introduction

The Login Page User Interface is a simple web application developed using HTML and CSS technologies. The project is designed to create a user-friendly login form for entering email and password details.

Objective

The main objective of this project is to design an attractive and login page interface using HTML and CSS. It helps in learning form elements, styling techniques, and webpage layout design.

Technologies Used

The project is developed using HTML5 for creating the structure of the login form and CSS3 for styling and layout design.

Features

The login page contains input fields for email and password entry with placeholder text for user

guidance. It includes a Login button and a “Forget Password?” link for additional functionality.

Working

When the webpage loads, the user can enter email and password details into the provided input fields. The Login button is used to submit the entered information. The Forget Password link provides an option for password recovery functionality. The application demonstrates the structure and design of a basic login interface.

Advantages

1. The project helps in understanding HTML form creation and CSS styling concepts.
2. It improves front-end web development and webpage design skills.

Conclusion

The Login Page User Interface project was successfully developed using HTML and CSS technologies.
